

PESE - PRESENTATION

GROUP 5:-

1. HARSHITA BISHT	41
2. HIMANSHU	42
3. KRISHNA BHATT	43
4. KUNJ TYAGI	44
5. MOHAMMAD FAIZ	45
6. PRACHI SINGH	47
7. PRIYANSHU RATURI	48
8. RAHUL SINGH	50

ROLL NO:-

THEME: TECHNOLOGY

**TOPIC: LOSS OF HUMAN
CREATIVITY DUE
TO AI OVERUSE**

Introduction – AI and Creativity

- Artificial Intelligence is rapidly transforming the way creative work is done.
- AI tools can write content, create art, compose music, and generate ideas.
- Creativity was once considered a unique human skill based on imagination and emotion.
- Excessive dependence on AI raises concerns about the decline of original human creativity.

5 BRCC Points of Human Creativity

- B – Brainstorm Ideas: Think of many possible solutions.
Example: Brainstorming ways to optimize a sorting algorithm.
- R – Reimagine Solutions: Look at a problem in a new way.
Example: Improving an attendance system with face recognition.
- C – Combine Knowledge: Connect different ideas.
Example: Using AI + Cloud to make a smart canteen app.
- C – Create Something: Turn ideas into real projects.
Example: Making a chatbot for college queries.
- C – Continue Learning: Keep learning new skills.
Example: Learning Python, ML, or React to build better software

How AI Creates Content

- Trained on huge datasets for comprehensive understanding.
- Utilises sophisticated pattern recognition for content generation.
- Leverages predictive analytics to anticipate user needs.
- Focuses on efficiency rather than inherent creativity.
- Enables fast and scalable content generation.
- Relies heavily on human input and oversight for ethical and accurate outputs.

Where AI Replaces Human Creativity

- AI creates art, music, stories, and designs
- Used in writing, advertising, logo & video creation
- Works using data patterns, not emotions
- Faster results with less human involvement
- Risk of reduced originality
- Humans now guide and supervise AI

Ethical Issues of AI Overuse

- When Convenience Replaces Responsibility
- Loss of Human Judgment – Over-reliance weakens critical thinking and accountability
- Bias at Scale – AI can amplify hidden prejudices faster than humans can correct them
- Privacy Erosion – Constant data collection normalizes surveillance
- Dehumanization – Decisions about people made without empathy or context
- Skill Atrophy – Humans stop learning what machines do for them

⚠ Core Message:

AI should support human intelligence — not replace it.

Impact of AI on Students and Learning

- Personalized and faster learning experience
- Helps in notes, assignments, and exam prep
- Encourages self-learning and accessibility
- Risk of over-dependence on AI
- Can reduce critical thinking if misused
- Teachers act as mentors and guides

Responsible and Ethical Use of ARTIFICIAL INTELLIGENCE

- Human Control & Oversight:
AI should support human decisions, not replace human judgment.
- Transparency :
Users should know when AI is being used and how outputs are generated.
- Avoid Overdependence :
Excessive reliance on AI can weaken critical thinking and creativity.
- Fairness & Bias Control :
AI systems must be designed to reduce bias and discrimination.
- Academic & Professional Integrity :
AI should be used ethically—no plagiarism or misuse of generated content.
- Data Privacy & Security:
Personal and sensitive data must be protected when using AI tools.

AI as a Tool vs. AI as a Replacement

AI as a Tool

(Augmentation / Co-pilot)

- Enhances human capabilities, does not replace them.
- Handles repetitive, low-value tasks for efficiency.
- Human retains final decision-making & creativity.
- **Goal:** Acceleration & better outcomes.
- **Example:** Doctor using AI for faster diagnosis.

AI as a Replacement

(Automation / Autopilot)

- Executes end-to-end tasks autonomously.
- Displaces human roles in standardized processes.
- Guarantees uniform output, lacks nuance/empathy.
- **Goal:** Cost reduction & scalability.
- **Example:** Fully automated factory line.

Balancing AI and Human Creativity

```
graph LR; A((Balancing AI and Human Creativity)) --- B((01 Define Clear AI Usage Boundaries)); A --- C((02 Mandatory Human Review & Ownership)); A --- D((03 Skill-First, Tool-Second Approach)); A --- E((04 Encourage AI as a Creativity Booster, Not a Shortcut)); A --- F((05 Limit Over-Reliance Through Policy & Awareness)); A --- G((06 Ethical and Responsible AI Integration));
```

01

Define Clear AI Usage Boundaries

02

Mandatory Human Review & Ownership

03

Skill-First, Tool-Second Approach

04

Encourage AI as a Creativity Booster, Not a Shortcut

05

Limit Over-Reliance Through Policy & Awareness

06

Ethical and Responsible AI Integration

THANKYOU
